SUMMARY

Senior Technical Project Manager and full-stack engineer with 8+ years at Green Origin Pvt Ltd, having progressed from Associate Software Engineer to leading cross-functional delivery teams. I take products from architecture and hands-on development through to release — across Laravel, React/TypeScript, Node.js, and Flutter — while owning sprint planning, client relationships, and quality. Recent work centres on AI-integrated applications and modern cross-platform mobile builds.

EXPERIENCE

Green Origin Pvt Ltd

Lahore, Pakistan

A technology solutions and software development company.

Senior Technical Project Manager (06/2021 – Present) · **Team Lead** (06/2020 – 05/2021) · **Senior Software Engineer** (06/2018 – 05/2020) · **Associate Software Engineer** (06/2017 – 05/2018)

- Lead delivery of web and cross-platform mobile products end to end — scoping, architecture, hands-on development, and release across Laravel, React/TypeScript, Node.js, and Flutter.
- Manage cross-functional teams and client relationships, running sprint planning, estimation, and progress tracking with JIRA, Trello, and MS Planner.
- Own technical decisions on architecture, REST API design, third-party and payment integrations, authentication, and mobile release pipelines (iOS & Android).
- Introduced AI-integrated features and modern React tooling into the team's delivery stack, mentoring engineers as the practice grew from associate to senior level.

SELECTED PROJECTS

Adam Commodities Compass — [React](#) / [TanStack Start](#) · [Node.js](#)

Investment and deal-management platform for a commodities firm.

- Built modules for company profiles, projects, transactions, assignments, targets, exits, and an investment committee workflow.
- Integrated trading and bank connections plus configurable AI settings, with role-based access, auditing, and reporting dashboards.

Online Cricket — [React](#) / [TanStack](#) · [Cloudflare](#)

Live cricket streaming, tournament, and scoring platform.

- Live match streaming, tournaments, real-time scoring, and a broadcast overlay for scorers.
- Player profiles, predictions, and notifications across a responsive React front end.

CeX Warranties Management System — [React 18](#) + [Vite](#) · [Node.js](#) / [Express](#) · [MySQL](#)

Modernised a legacy PHP warranty system into a React + Node.js stack.

- Rebuilt warranty administration on an Express API over the existing MySQL database, secured with Google OAuth 2.0 and Passport.js.
- Delivered a responsive React front end for warranty lookup, management, and reporting.

Resource Management System (RMS) — [Laravel](#) · [Ionic](#) / [Angular](#)

Comprehensive facility and service-user management platform for a multi-site accommodation provider.

- Workforce management — employee profiles, contracts, rotas, and payroll, with geofenced QR clock-in/out and cross-platform mobile apps.
- Operations suite — visitor QR check-in/out, incident reporting with adult and child safeguarding referrals, transport dispatch (vehicles, drivers, route maps), and inventory with tablet-based maintenance tickets.
- Service-user lifecycle across sites — arrivals and transfers, medical and vaccination records, courses, resident meetings, and budget-controlled dry-stock procurement.

Scholar Management System — [Laravel](#) · [Flutter](#)

Multi-stage scholarship application and assessment platform for the Avicenna Foundation.

- Separate scholar and admin portals driving a staged pipeline — personal details, psychometric test, video submission, online assessment, and in-person interview.
- Laravel backend with role-based permissions, per-stage scoring and approvals, event and slot scheduling, and automated applicant emails; Flutter apps for scholars and faculty.

Fursa Capital — [React.js](#) · [Laravel](#)

Platform connecting entrepreneurs with investors.

- React front end with a Laravel REST backend, secure authentication, and role-based permissions for entrepreneurs and investors.
- Project posting and browsing, investment tracking, and an admin panel for project verification and user management.

Masjid Timetable & Ads Management System — [React](#) · [Laravel](#) · [Capacitor](#)

Digital-signage platform for mosques — screens, prayer times, and content from one dashboard.

- Tablet and TV screen app driven by unique app codes, controlled from a Laravel admin panel managing masjids, screens, playlists, content, and prayer times.
- React theme builder with configurable widgets — clock, prayer countdown, weather, Asma-ul-Husna, and audio — plus per-masjid device management, packaged via Capacitor.

Voters Management System — [Laravel](#) · [Flutter](#)

Voter-engagement platform with a Laravel portal, Flutter field app, and role-based access.

- Four roles (admin, leader, volunteer, voter) with party management, approval workflows, and granular roles and permissions.
- Postcode-matched volunteers collect voter records and party-sentiment feedback in the field; bulk upload and analytics on the portal.

HotMic Radio — [React](#) / [TypeScript](#) · [Capacitor](#)

Social radio and DJ streaming platform with mobile apps.

- Live charts, polls, giveaways, broadcasts, and a team inbox, with moderation tooling and DJ analytics.
- Cross-platform iOS/Android builds via Capacitor with push notifications and social login.

Morahanat Strike Zone — [React](#) / [TypeScript](#) · [Capacitor](#)

Multi-sport prediction game (football, F1, UFC) with a season prize.

- Predictions, private leagues, and leaderboards across multiple sports with real-time results.
- Native mobile builds with authentication, push notifications, and social login.

Additional projects: Hotel Management System (Laravel/Flutter) · HotDad Club men's fitness & lifestyle platform (React/Capacitor) · AI Tarot reading app (React/Capacitor) · Qanoon AI legal assistant (FastAPI/React) · Blood Donation app (Flutter) · Media Downloader (Node.js/Express) · Food Recognition & Calorie app (Flutter/Gemini/TFLite) · Mood Detection (Python/Keras/OpenCV) · Talkative chat app (Flutter/Supabase) · The Quran reader (Flutter) · Call Recorder (Flutter) · Laravel Popup Builder (Livewire) · Pakistan Hospitals Scraper (Python).

TECHNICAL SKILLS

Languages & Frameworks: PHP, Laravel, CodeIgniter, JavaScript, TypeScript, React, Angular, Node.js, Express, Python, FastAPI, Dart / Flutter, Ionic, Capacitor

Frontend: HTML, CSS, Tailwind CSS, shadcn/ui, TanStack, Vite, jQuery, responsive UI/UX

Backend & Data: REST API design, MySQL, Firebase, Supabase, third-party & payment integrations, Google OAuth / Passport.js

Mobile: Flutter, Ionic, Capacitor (iOS & Android), geofencing, QR scanning, push notifications

AI / ML: LLM & AI-assistant integration, retrieval-augmented generation, AI-powered product features

Project Management: Agile / Scrum, sprint planning, team leadership, client management, JIRA, Trello, MS Planner

EDUCATION

Bachelor of Science – BS Software Engineering

01/2013 – 01/2017

University of Management and Technology (UMT)
